Series B Investor Pitchbook

RAISING ₹140 CRORE

Agri-Fintech — Post-Harvest Financing | Pune, India | August 2026

THE PROBLEM

Farmers sell too early, at the worst price of the year

Indian farmers routinely sell grain within weeks of harvest — when prices are lowest — because they need cash and have nowhere affordable to store their crop while prices recover.

₹90,000+

CRORE LOST ANNUALLY

to distress selling of stored-grain crops across India every year

< 2%

of eligible produce is ever financed against a warehouse receipt

Trust Failure

Paper eNWR receipts are forgeable, and lenders cannot verify stored quantity or quality in real time — so banks price in heavy risk, or simply refuse to lend.

Access Failure

Even where a trustworthy warehouse exists, it is often too far for a smallholder to reach — so the receipt system never gets used at all.

WHY NOW

eNWR is a proven regulatory instrument — no company has yet built the digital, trust-verified, farmer-usable rail that solves both trust and access failure at once. That is the gap Annapurna fills.

THE SOLUTION

AnnaChain — borrowing against grain, as easy as gold

A hybrid warehouse model — partner network + owned mini-warehouses — stitched together by four technology layers.

IoT-Verified Warehousing

Sensors confirm stored quantity and quality in real time, in both warehouse formats.

Blockchain-Anchored eNWR

WDRA-compliant, tamper-evident digital receipts replace forgeable paper.

Instant Credit Marketplace

Farmers borrow 70–75% of mandi price, disbursed in 24 hours via 11 partner banks/NBFCs.

AI “Sell Signal”

Recommends optimal sale timing and connects farmers directly to buyers.

Why nobody else has solved this: it requires running physical warehouse operations, a blockchain/regulatory-compliant registry, and a bank-grade lending marketplace all at once — most players attempt only one. Every loan is collateral-backed by verified physical stock, so credit risk is structurally lower than unsecured farmer lending.

Two warehouse formats, one integrated rail

	PARTNER WAREHOUSES	OWNED MINI-WAREHOUSES
Ownership	Third-party owned; Annapurna fits IoT sensors	Annapurna builds and owns directly
Capital intensity	Asset-light	Asset-heavy
Where deployed	8 states with existing warehousing	Underpenetrated rural clusters with no adequate warehouse
Capacity	Large (5,000–10,000 t)	Small, modular (~700 t average)
Revenue to Annapurna	Facilitation commission + SaaS/IoT fee	Facilitation commission + direct storage fee

THE MOAT: Owned-warehouse-collateralized loans run at roughly half the NPA rate of partner-warehouse loans — Annapurna directly controls custody and quality.

SAM re-rated 2.8x once Annapurna can build its own warehouse

TAM
₹8,40,000 Cr

SAM
₹6,72,000 Cr

SOM
₹1,979 Cr

Independently rebuilt figures — see methodology, right

TAM — bottom-up + top-down cross-check

Bottom-up: FY26 production (foodgrain + oilseeds) × MSP-based price × 68% marketable-surplus factor = ₹7,85,541 Cr. Top-down: Agri GVA × storable-crop share = ₹8,60,000 Cr. Both converge with the case's stated ₹8,40,000 Cr.

SAM — rebuilt using the case's own coverage logic

The 16+ states Annapurna's Series B build-out targets hold ~80% of national storable-crop surplus. 80% × independent TAM = ₹6,72,000 Cr — 2.8x the case's original ₹2,40,000 Cr, since owned warehouses no longer require a pre-existing partner nearby.

SOM — this model's own forecast, sized against the rebuild

FY31E annual disbursement (₹1,979 Cr, from Task 1) is ~0.29% of independent SAM. The case's ₹6,000 Cr/yr aspiration is ~0.89% of independent SAM — still modest share-capture, not a stretch goal.

THE CRITIQUE: Owning mini-warehouses doesn’t eliminate the density constraint on SAM — it trades a partner-availability constraint for a capital and build-out-pace constraint.

TRACTION

Three years of compounding growth

265,000

Cumulative farmers onboarded

195 / 40

Partner / owned warehouses (cumulative)

₹390 Cr

Cumulative loan value disbursed

1.6%

Blended Gross NPA (from 3.8% in FY24)

70%

Repeat borrower rate (Year 2+)

34,800

Active borrowers in FY26 alone

Series A pilot proof point: 18 mini-warehouses built in FY25 grew to 40 by FY26, reaching ~70,000 farmers who previously had zero warehouse access — the board's evidence base for scaling with Series B.

UNIT ECONOMICS

Economics that get better as farmers stay

Per active borrower, FY26

Average Loan Ticket Size	₹1,17,800
Take Rate	6.31%
CAC	₹2,650
Gross Margin per Borrower	₹8,830
LTV (3.33-yr borrower life)	₹29,404
CAC Payback Period	~3.6 months

LTV : CAC

~11.1x

well above the ~3x threshold typically considered healthy for a lending-adjacent fintech model

COLLATERAL QUALITY DRIVES CREDIT QUALITY

Partner-warehouse NPA

2.1%

Owned-warehouse NPA

0.9%

Every loan is collateral-backed by verified physical stock, so credit risk is structurally lower than unsecured farmer lending — and roughly halves again on owned warehouses.

FUNDING HISTORY

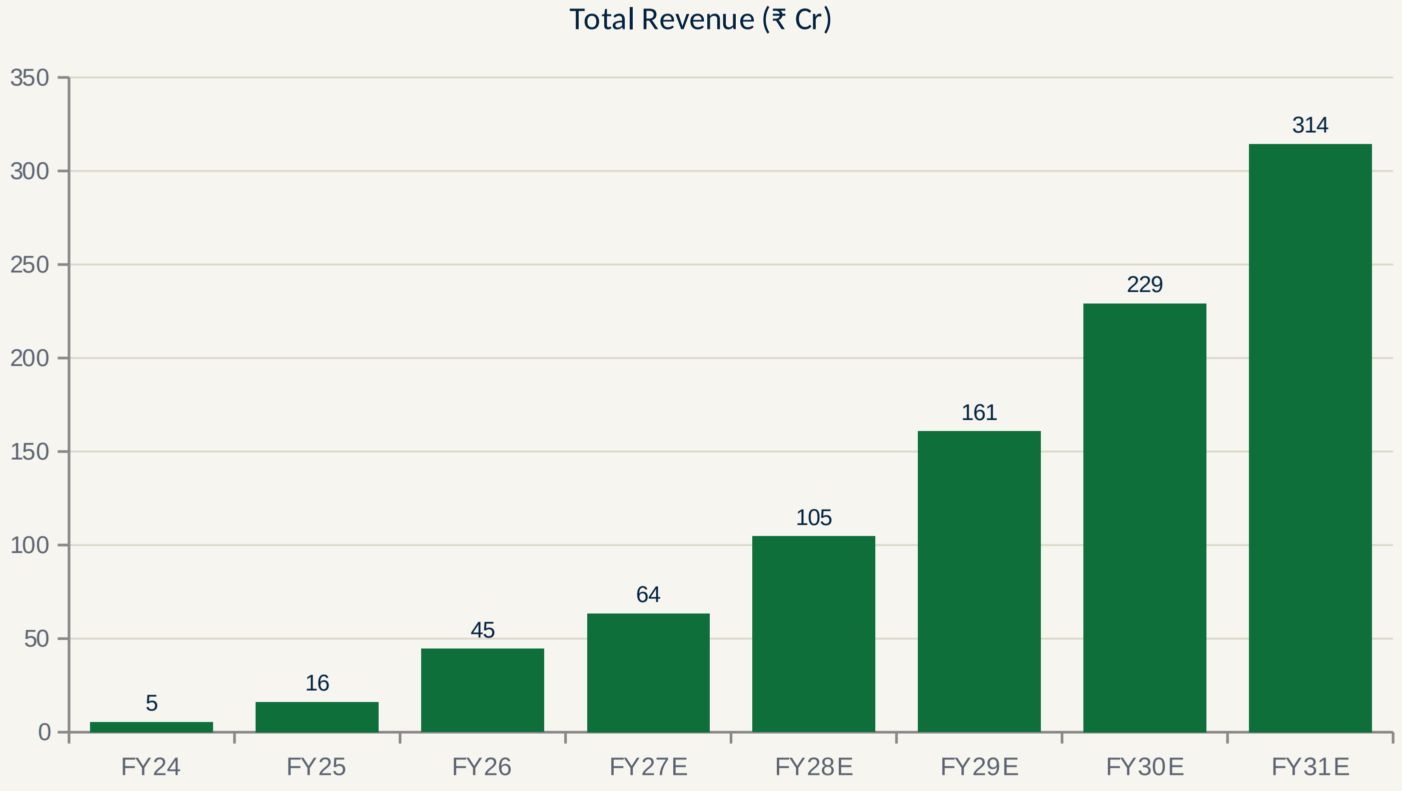
Four rounds, each proving out the next stage

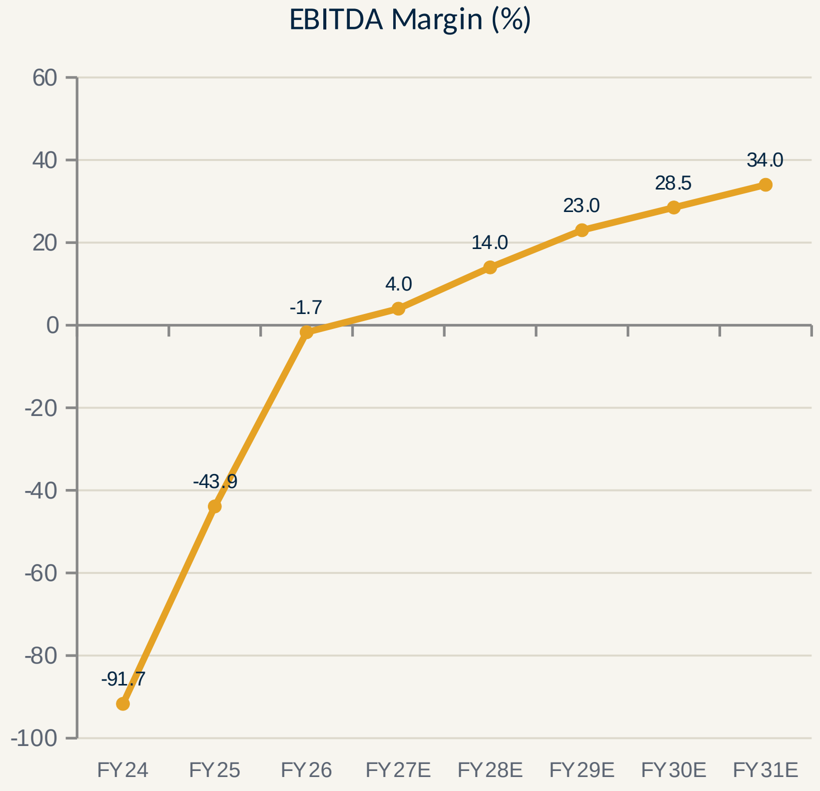
	Pre-Seed	Seed	Series A	Series B
Date	Aug 2021	Nov 2022	Apr 2024	Ask
Amount	₹2.5 Cr	₹9.0 Cr	₹42.0 Cr	₹140 Cr
Post-Money	₹14.0 Cr	₹52.0 Cr	₹268.0 Cr	₹700 Cr*
Milestone	MVP: 5 partner warehouses	Scale to 45 partner warehouses	120+ partner warehouses; pilot 18 owned mini-warehouses	Scale the hybrid model nationally

*Indicative post-money at the recommended Series B valuation range (see Valuation).

Every prior round hit its milestone on time — the Series A pilot (18→ 40 owned warehouses) is the direct evidence base for the Series B scale-up thesis.

From breakeven to ~34% EBITDA margin by FY31E





₹314 Cr FY31E Revenue

48% 5-yr Revenue CAGR (FY26–FY31E)

₹65 Cr FY31E Net Income

A capital-heavy model that becomes self-funding

₹ in Lakhs unless noted	FY27E	FY28E	FY29E	FY30E	FY31E
Total Revenue (₹ L)	6,346	10,468	16,078	22,921	31,429
EBITDA (₹ L)	254	1,466	3,698	6,532	10,686
EBITDA Margin	4.0%	14.0%	23.0%	28.5%	34.0%
Net Income (₹ L)	(452)	362	1,794	3,647	6,463
Free Cash Flow to Firm (₹ L)	(2,140)	(1,882)	(860)	656	3,173
Closing Cash (₹ L)	13,247	11,407	10,567	11,220	14,369

Balance sheet balances every year across FY27E–FY31E. Net income turns positive in FY28E; free cash flow to the firm turns positive in FY30E as the mini-warehouse capex cycle matures.

Stress-testing the base case: a bear scenario

Five assumptions flexed downward simultaneously — disbursement growth, take rate, gross margin, and storage revenue all worse than base; capex running over budget.

DRIVER (FY27E → FY31E)	BASE CASE	BEAR CASE	CHANGE
Annual Disbursement Volume (₹ Cr)	436 → 1,979	392 → 1,781	*~10% lower*
Blended Take Rate	6.5% → 7.1%	6.0% → 6.6%	*~50 bps lower*
Capex — cost overruns (₹ L)	2,300 → 5,100	2,530 → 5,610	*~10% higher*
Gross Margin — higher cost of revenue	70% → 74%	65% → 69%	*~5 pts lower*
Avg. Storage Revenue (₹ L / warehouse / yr)	17 → 25	15.3 → 22.5	*~10% lower*

₹314 Cr → ₹276 Cr
FY31E Revenue (~12% lower)

34% → 29%
FY31E EBITDA Margin (~5 pts lower)

FY27E → FY28E
EBITDA breakeven slips one year

Revenue and EBITDA recomputed using the same Revenue Build and Income Statement formulas as the base case, holding warehouse counts, opex ratios, and financing terms constant — isolating the impact of the five stressed assumptions above. Full scenario toggle (Base / Bull / Bear) lives in the Valuation tab.

THE ASK

Raising ₹140 Crore to scale the hybrid model nationally

55%

~₹77 Cr

Warehouse Network Expansion

Scale the partner network to 16+ states and build ~250 additional owned mini-warehouses over the forecast window.

15%

~₹21 Cr

AI Price-Prediction Engine

Deepen the marketplace's sell-signal product.

15%

~₹21 Cr

Team & Operations Scale-Up

Grow field operations, engineering, and compliance headcount.

15%

~₹21 Cr

Working Capital & Runway

Buffer against the capital-heavy hybrid model's cash intensity.

Series B (₹140 Cr) assumed to close at the start of FY27, following a ₹2.5 Cr Pre-Seed, ₹9.0 Cr Seed, and ₹42.0 Cr Series A.

Recommended range: ₹560 Cr pre-money / ₹700 Cr post-money

DCF (3-STATEMENT FCFF)

₹176 Cr

Equity Value

WACC 14.8% | Terminal growth 6.0%

5-yr explicit FCFF turns positive in FY30E; Gordon-growth terminal value.

COMPARABLE COMPANIES

₹315 – 1,183 Cr

Observed EV/Revenue range: 2.0x–7.5x

Applied to FY31E revenue of ₹314 Cr, discounted to present value at the DCF discount rate.

Observed valuation range ₹176–1,183 Cr (avg. ₹558 Cr) → Final terms: ₹560 Cr pre-money / ₹700 Cr post-money

PRO-FORMA POST-SERIES B CAP TABLE

TEAM

Operators who have run the physical, digital, and regulatory pieces

Priya Deshmukh

Chief Executive Officer

Ex-NCDEX

Deep commodity-markets and exchange background — understands price discovery, mandi mechanics, and how farmers actually make selling decisions.

Rohan Iyer

Chief Technology Officer

Ex-Blockchain / IoT

Built the AnnaChain stack — IoT sensor verification and the blockchain-anchored eNWR registry — from the ground up.

Suresh Patil

Chief Operating Officer

Ex-FCI, 15 yrs warehousing

Two decades in physical grain storage and logistics — runs warehouse operations, quality control, and the field team.

Together: exchange-side price discovery, ground-level warehouse operations, and the technology to verify and finance stored grain — the three disciplines this model requires at once.

KEY RISKS

What could go wrong — and how it's mitigated

Execution Risk on Owned Warehouses

Building ~250 new mini-warehouses is capital- and operations-intensive.

MITIGATION

Series A pilot (18→40 units) proved the playbook; ~55% of Series B funds this line item directly.

Warehouse Partner Concentration

Reliance on third-party partner warehouses in 8 states creates counterparty exposure.

MITIGATION

Owned-warehouse mix rises from 40 to 290 units by FY31E, structurally reducing partner dependence.

Commodity Price Risk

Sharp grain price swings affect collateral value and loan-to-value ratios.

MITIGATION

Loans capped at 70–75% of mandi price; IoT verification supports real-time collateral monitoring.

Competitive Response

Larger agri-fintech or banking players could replicate parts of the stack.

MITIGATION

Moat is the full stack — warehousing + blockchain registry + lending marketplace — operating together.

Let's build the rail every farmer deserves.
